GLASS TOP INSTALLATION

Do not spread this lower part  
with the glue.

Spread the top surface with the supplied  
polyurethane (or silicon) glue the very way  
you see in this pic. Put the new glue on top of  
the old one.

Frame the lower part of the glass top, then the upper part and press it forcefully, thus enabling it to get glued.

Watch out! Due to the soft glue you may need tape to fasten the glass top. Let it dry for at least 2 hours.
